Customized Power Outlet Boxes

These robust power outlet boxes provide a convenient connection point for electrical supply and for safe and quick reset of protective devices. Enclosures are made from 2mm steel and powder coated to any colour required. Some common uses for these outlet sub boards are: Commercial and Industrial Factories, Workshops, Site Service Points and where rugged and harsh conditions prevail.

Standard Models include two three phase socket outlets and one, double horizontal single phase power point. Protective devices installed will depend on the type of load the outlet will be subjected to.

Standard Model Dimensions:

W160xH790xD100
Measurements in millimetres

Standard models are designed to fit inside an I-Beam support beam to be discrete with the added protection of the beam surrounding it.

Custom Built Models are built to the customer requirements and can be designed and altered to fit in any place necessary. Customers may choose the number of three phase and single phase socket outlets installed, the dimension of the steel enclosure and the colour it will be painted.
