WOODTECH
Innovative Technology

Integrated specialise in all aspects of Sawmill Automation, offering a total network solution that enhances production. Woodtech control packages have been developed by Integrated over the last 40 years of being involved in the timber industry and have proven to be at the top of the line in all aspects of timber production.

Woodtech features the latest technologies in process automation,

- Designed to be flexible for System changes (on site or via modem)
- Custom Design for machinery or one off operations
- Custom Designed for the operator or site
- Retrofit onto existing systems
- Complete System upgrades
- Pre-designed packages

The Woodtech V.10 Total kiln control system is a multi-stepped and scheduled system designed to control any type of kiln. This system is developed to give full control and flexibility to the operator/s. Woodtech V.10 has been tested and developed alongside experienced operators and technicians to ensure functionality of the software is at the highest standard.

Woodtech control systems are designed primarily for the timber industry and include systems for:

- Log debarking and cutting
- Primary log breakdown and re-saw setworks
- Boiler and boiler in-feed
- Kiln drying
- Dust collection and handling
- Grading and product management
- Re-manufacturing and moulding
